Large scale performance evaluation of electron transfer dissociation tandem MS
Focus your protein biomarker research!

Developed in collaboration with the Protein Quantitation Consortium, Sigma’s Custom AQUA Peptides™ enable accurate, efficient mass spectrometric quantitation of protein biomarkers.

- Focus your analysis on significant protein biomarkers
- Accurately quantitate low abundance proteins
- Eliminate costly, time consuming stable isotope labeling steps
- Measure site-specific phosphorylation states
- Validate gene silencing at the protein level

Our Innovation, Your Research — Shaping the Future of Life Science

AQUA Peptide™ is a trademark of Harvard Medical School.

This method was developed by Dr. Steve Gygi and colleagues at Harvard Medical School [Stemmann O, Zou H, Gettier SA, Gygi SP, Kirschner MW; Dual inhibition of sister chromatid separation at metaphase, Cell 2001, Dec 14, 107: 715-726] and is the subject of both U.S. and PCT Patent Applications. Limited use of this method is permitted under a licensing arrangement with Harvard Medical School.
Revolutionize!

With Sigma, revolutionize your mass spectrometry sample prep

Traditional tryptic digests can require up to 18 hours — Sigma’s Trypsin Spin Column can complete the same digest in only 15 minutes!

- Reduce tryptic digest time
- Successfully digest and recover 10 to 100 µg of protein sample
- Minimize autolytic and chymotryptic spectral peaks
- Analyze samples directly following digestion

To learn more, visit sigma.com/trypsinspin

Our Innovation, Your Research — Shaping the Future of Life Science
Spanish National Cancer Research Centre (CNIO)

We seek Scientist to lead a research unit on Proteomics

Unit Leader, Proteomics (Ref: ULP)

We seek a Scientist with:

- A Ph.D. degree and 10 years of experience in the field of proteomics.
- Proven ability and leadership skills to develop and lead a Proteomics Unit that will focus on the implementation and development of cutting edge technologies such as MALDI and ESI-based spectrometry, ion-trap, functional, quantitative proteomics, etc.
- Interest in collaborating with other existing CNIO Groups to apply these technologies to cancer research.

The CNIO offers:

- Access to state of the art proteomics equipment.
- An energetic working environment with a multidisciplinary approach to cancer research.
- An opportunity to be part of one of the few European Cancer Research Centres of excellence that effectively combines basic and applied research.
- An attractive benefits package.

- A Ph.D. degree and 10 years of experience in the field of proteomics.
- Proven ability and leadership skills to develop and lead a Proteomics Unit that will focus on the implementation and development of cutting edge technologies such as MALDI and ESI-based spectrometry, ion-trap, functional, quantitative proteomics, etc.
- Interest in collaborating with other existing CNIO Groups to apply these technologies to cancer research.

Applications must include a detailed CV, synopsis of research experience, and a strategic plan. Apply on-line (www.cnio.es), or contact our Personnel Department directly by Email: Personal@cnio.es quoting the corresponding reference on all correspondence. All enquiries and applications will be treated confidentially.

Centro Nacional de Investigaciones Oncológicas
Melchor Fernández Almagro, 3. 28029 Madrid, Spain.
Tel: +34 91 2246900, Fax: +34 91 2246980.

Assistant Professor, Tenure Track
University of Texas Southwestern Medical Center
Division of Translational Research

The Division of Translational Research in the Department of Internal Medicine is seeking an Assistant Professor, Tenure Track. The position requires a Ph.D. or M.D./Ph.D. in chemistry, engineering or biology and at least two years of post-doctoral experience. Previous experience in the areas of proteomics, metabolomics and related fields with an interest in developing these techniques for medical diagnostics or discovery biology is preferred, but candidates interested in any aspect of chemical biology or translational research will be considered. The Division is focused on the development and application of novel technologies to important problems in medicine and biology. The Division provides an outstanding physical and intellectual environment and facilitates collaborations with medical and biological colleagues within the medical school. In addition, the position will include the teaching and training of graduate students, house staff, and fellows.

Qualified applicants should submit a curriculum vitae, a concise description of their proposed research, and three letters of recommendation to:

Thomas Kodadek, Ph.D.
Director, Division of Translational Research
UT Southwestern Medical Center at Dallas
5323 Harry Hines Blvd.
Dallas, TX 75390-9185.

UT Southwestern is an equal opportunity affirmative action employer.
[OUTCOME]

STARTING TODAY, PROTEIN IDENTIFICATION WILL INSPIRE YOU TO QUESTION EVERYTHING ABOUT YOUR SAMPLE. EXCEPT YOUR RESEARCH METHODS.

There’s a new standard for rigorous protein identification. With our Identity® High Definition Proteomics™ system, you can identify proteins based on multiple peptide matches. Which means fewer false positives. And the utmost confidence in your results. To learn more, visit waters.com/identity.
