A high quality yeast protein interaction map
Finally, move your proteomics research from data to discovery. The Rosetta Elucidator system enables data processing for LC/MS-based differential quantification to achieve high-confidence results. You’ll benefit from:

• End-to-end data management and analysis
• Multiple instrument and platform support
• A highly customizable environment

For more information, please visit www.rosettabio.com/Elucidator.
The University of Iowa Carver College of Medicine is seeking an Assistant, Associate or Research Scientist to direct a core research support facility in mass spectrometry with an emphasis on proteomics. This individual will be expected to manage the core facility including staff selection, assignment and scheduling, monitoring of facility funds, coordination of data generation, analysis and identification, acquisition and use of equipment and facilities, operate and maintain equipment in the facility. The director will assist faculty in the interpretation of spectra derived from tryptic digests of proteins, post-translational modifications of proteins, carbohydrates and lipids.

Required Qualifications for all positions: PhD or professional equivalent. Evidence of defined research in the field of proteomics and mass spectrometry. The candidate will be fully conversant in the analysis software used in mass spectrometry and proteomics. Interest and ability in managing the facility, maintaining instruments, assisting faculty in submission of research grants and training graduate students and postdoctoral fellows. Excellent oral, written and interpersonal skills are also necessary.

Desirable Qualifications for all positions: Prior experience successfully securing external grant funding. Prior supervisory experience is highly desired.

To be eligible for the Associate Research Scientist position, candidate must have contributed to a number of peer-reviewed publications that have had a major impact on advancing the field or discipline.

To be eligible for the Research Scientist position, candidate must have a record of research productivity as evidenced by a record of peer-reviewed publications, and have training in the latest techniques in the field of proteomics and mass spectrometry. Candidate will generally be sought out as a consultant in proteomics, will receive invitations to address national professional organizations and will be recognized in the literature of proteomics through favorable reviews or numerous citations. Candidate must have prior experience in securing large instrumentation grant funding. Demonstrated job-related experience with and/or commitment to diversity in the work/academic environment is required.

To apply for this position, go to http://jobs.uiowa.edu/ and click on requisition #53482, #53484 or #53485. Women and minorities are strongly encouraged to apply. The University of Iowa is an Equal Opportunity/Affirmative Action Employer.
A new way of looking at proteins.

Can you spot the protein? It's simple. With the BioOdyssey™ Calligrapher™ miniarrayer, you can create the protein array of your choice. Print cell or tissue lysates and create reverse-phase arrays to discover interactions, or antibody arrays to quantitate multiple interactions, all from your laboratory benchtop.

The Simple Way to Print Your Own Protein Arrays
- Cooled work surface to help maintain protein integrity
- Easy-to-use computer software to automatically create grids
- Optimized washing parameters for eliminating carryover contamination
- Small footprint to fit easily on your benchtop
- BackTracker™ software to configure source plates
- Spot onto slides, membranes or into the wells of 96 well plates

For more information on printing protein arrays in your lab, visit us on the Web at www.bio-rad.com/ad/calligrapher/
