Fluorescence-activated vesicle sorting (FAVS) for isolation of basolaterally-targeted exocytic vesicles
By deconstructing proteins, you have the potential to create a cure for disease. Just ask Doctor Julie Leary, Professor of Chemistry and Biochemistry at the University of California, Davis. She is not a drug manufacturer. Rather, she and her team study how proteins behave to see how they might cause diseases such as cancer. Doctor Leary then shares that insight with pharmaceutical companies so they can develop drugs that mimic protein-binding sites to actually inhibit the disease process. With the superior detection power of the LCT Premier™ XE and SYNAPT HDMS™ from Waters, Doctor Leary can see proteins for what they really are. The key to the next cure.

HOW BIG WILL YOUR IMPACT BE?

Cancer Proteomics Technology Projects Manager  
(expertise in mass spectrometry)

The Office of Technology and Industrial Relations (OTIR) of the National Cancer Institute (NCI), National Institutes of Health (NIH), Department of Health and Human Services (DHHS), invites applications for a Cancer Proteomics Technology Projects Manager, GS-4016O-16. OTIR is currently coordinating a program and research activities of the NCI Clinical Proteomic Technologies for Cancer initiative (CPTC) - a large multidisciplinary initiative of $104M (http://proteomics.cancer.gov) to assess and apply proteomic technologies and data resources to solve mission-critical problems in cancer research.

The successful candidate serves as a Cancer Proteomics Technology Projects Manager assisting in efforts that lead the coordination and execution of large-scale proteomic projects encompassing mass spectrometry, including the development of reagents and performance metrics that will enable them to ultimately be applied successfully to the discovery of biomarkers in clinical populations. This is a key management position for providing leadership, management, and oversight of a wide range of projects within the CPTC. The individual selected for this position will be conversant with a range of biomedical and mass spectrometry technology areas and have demonstrated research track record in biotechnology and/or proteomics with an existing publication record. Candidate needs to have proven experience in managing research programs and ability to assess technological 'big picture'. Excellent communication skills are required; having industrial experience is a plus. A Ph.D. or M.D. in analytical/clinical chemistry, chemical or biological sciences is desired, with extensive experience in mass spectrometry proteomics applications.

Salary is commensurate with experience and a full Civil Service package of benefits (including retirement, health, life and long-term care insurance, Thrift Savings Plan participation, etc.) is available. The NCI vacancy announcement for these positions contains complete application procedures and lists all mandatory information, which you must submit with your application. To obtain the vacancy announcements for this position, see announcement number NCI-08-282247- DE at http://usajobs.opm.gov/. This position is subject to a background investigation. Applications must be received by September 17, 2008.

NCI, NIH and DHHS are Equal Opportunity Employers.

need to promote open positions, fellowship opportunities, programs, or conferences in biochemistry or molecular biology?

Advertise in the publications of the American Society for Biochemistry and Molecular Biology (ASBMB). The ASBMB publications include The Journal of Biological Chemistry, Molecular and Cellular Proteomics, Journal of Lipid Research, and ASBMB Today. Advertising in these publications is a perfect way to reach researchers and clinical investigators who are at the top of their fields. And the society's newsmagazine, ASBMB Today is a direct vehicle to the 11,500 ASBMB members. Some issues are featured at high attendance meetings like Experimental Biology. Print and online ads are available. Free online posting with paid print ad in ASBMB Today.

CONTACT FASEB AdNet at 301-634-7156 or email adnet@faseb.org for an ad estimate.
View ASBMB rate card and full media kit at www.faseb.org/adnet.
INTRODUCING THE 2ND ANNUAL EVENT

Welcome to Proteomics Europe conference and exhibition, taking place in the historic city of Lisbon. This meeting will be co-located with Advances in Metabolic Profiling and the European Biomarkers Summit.

The distinguished faculty includes:

- **Dolores Cahill**  Professor of Translational Science, Conway Institute, University College Dublin
- **Thomas Joos**  Head of Biochemistry, NMI Natural and Medical Sciences Institute, University of Tübingen
- **Helmut Meyer**  Director, Medical Proteome Centre, Ruhr University Bochum

Be part of the event

We are currently accepting poster submissions. Deadlines and further details can be found online.
