

Special Issue: Neuroproteomics

Editorial

- 341 **Neuroproteomics: How Many Angels can be Identified in an Extract from the Head of a Pin?**
Jeffery L. Twiss and Mike Fainzilber

Review

- 344 **Neural Stem Cells (NSCs) and Proteomics**
⌘ *Lorelei D. Shoemaker and Harley I. Kornblum*
- 355 **Glial Contributions to Neural Function and Disease**
Matthew N. Rasband
- 362 **Emerging Proteomic Technologies Provide Enormous and Underutilized Potential for Brain Cancer Research**
Qiang Tian, Vineet Sangar, and Nathan D. Price
- 368 **Proteomics of the Synapse – A Quantitative Approach to Neuronal Plasticity**
Daniela C. Dieterich and Michael R. Kreutz
- 382 **Signaling Over Distances**
Atsushi Saito and Valeria Cavalli
- 394 **Molecular and Cellular Mechanisms of Axonal Regeneration After Spinal Cord Injury**
Erna A. van Niekerk, Mark H. Tuszyński, Paul Lu, and Jennifer N. Dulin
- 409 **Neurodegeneration and Alzheimer's disease (AD). What Can Proteomics Tell Us About the Alzheimer's Brain?**
Guillermo Moya-Alvarado, Noga Gershoni-Emek, Eran Perlson, and Francisca C. Bronfman

Special Issue Articles

- 426 **Analysis of Proteins That Rapidly Change Upon Mechanistic/Mammalian Target of Rapamycin Complex 1 (mTORC1) Repression Identifies Parkinson Protein 7 (PARK7) as a Novel Protein Aberrantly Expressed in Tuberous Sclerosis Complex (TSC)**
[S] *Farr Niere, Sanjeev Namjoshi, Ehwang Song, Geoffrey A. Dilly, Grant Schoenhard, Boris V. Zemelman, Yehia Mechref, and Kimberly F. Raab-Graham*
- 445 **Succination is Increased on Select Proteins in the Brainstem of the NADH dehydrogenase (ubiquinone) Fe-S protein 4 (Ndufs4) Knockout Mouse, a Model of Leigh Syndrome**
[S] *Gerardo G. Piroli, Allison M. Manuel, Anna C. Clapper, Michael D. Walla, John E. Baatz, Richard D. Palmiter, Albert Quintana, and Norma Frizzell*

On the cover: Müller cells (*brownish*), the highly arborized multi-functional macroglia of the retina (*back right*), are in intimate contact to all other retinal types such as cone (*dark blue*) and rod (*bright blue*) photoreceptors, bipolar (*red*), horizontal (*dark green*), amacrine (*bright green*) and ganglion cells (*yellow*). Their isolation with optimal conservation of fine side branches is challenging. To enable comprehensive proteomic profiling of Müller cells, which make up only 1.5% of the whole retinal cell population, gentle enzymatic digestion was applied in combination with magnetic activated cell separation. Label-free quantitative liquid chromatography-mass spectrometry comparing highly enriched Müller glia (>95%) to neuronal cells allowed identification of novel Müller cell-specific proteins such as peroxiredoxin 6 (*purple*), shown in the magnifying glass. Artwork by Jens Grosche (Effigios AG). For more details, see the article by Antje Grosche *et al.*, pages 462–480.
