On the cover: We built and compared the interactomes of human, fly and yeast to identify conserved sub-networks and test for enrichments/depletion of interactions involving ordered (green, yellow and blue) and disordered proteins (red). A, A' and A'', as well as B, B' and B'' illustrate how disordered interactions involving orthologous proteins can change during evolution. For details, see article by Patrick Aloy *et al.*, pages M111.014969, pages 1–8.
