On the cover: O-GlcNAc modification of the master osteogenic transcriptional regulator Runx2 [*runx*-related transcription factor 2/core-binding factor subunit α 1 (Cbfa1)] reveals new links between glucose homeostasis and bone formation. Higher energy collisional dissociation (HCD)-generated HexNAc product ions were utilized to trigger acquisition of electron transfer dissociation (ETD) fragmentation spectra to facilitate characterization of O-GlcNAc modified sites. For details, see the article by Alexis K. Nagel, *et al.*, pages 3381–3395.

- 3352 **Acetylome Analysis Reveals Diverse Functions of Lysine Acetylation in *Mycobacterium tuberculosis***
