On the cover: Schematic depicting how PC1/3 inactivation impacts macrophage signaling, intracellular traffic and secretion of humoral factors such like proinflammatory cytokines, danger signal molecules and anti-tumoral factors via non-canonical secretion pathway (1) leading TLR4 activation (2) through MyD88-dependent pathway, promoting NF- κ B level (3) its nuclear translocation (4) Ca²⁺ mobilization (5) and, promoting multi vesicular bodies formation (6). For details, see the article by Marie Duhamel, *et al.*, pages 2857–2877.
