On the cover: Shown are four images from a time lapse movie of HeLa cells expressing Tubulin GFP (green) and Histone H2B mCherry (red). These cells were arrested in metaphase with the proteasome inhibitor MG132, and then treated with the Cdk1 inhibitor RO3306, producing a synchronized, phosphatase dependent form of mitotic exit. For details, see the article by Rachael A. McCloy, *et al.*, pages 2194–2212.
