On the Cover: The RAS/mitogen-activated protein kinase (MAPK) pathway stimulates the p90 ribosomal S6 kinase (RSK) family, which contains four related members (RSK1-4). Using a proximity-dependent biotinylation (BioID) approach, we identified new RSK substrates including p120ctn. Proteomic analysis of p120ctn identified several proximity partners that appear to be regulated by Ser320 phosphorylation, suggesting new roles for p120ctn in RNA metabolism. For details, see the article by Meant *et al.*, 50-64.
