On the Cover: Our results showed that the decreased core fucosylation of IgG is a player in antibody-dependent cell-mediated cytotoxicity responsible for the destruction of thyroid tissue in autoimmune thyroid diseases. The cover illustration expresses the importance of IgG defucosylation in thyroid autoimmunity as the playing cards depicting the defucosylated IgG as an ace - the strongest card. For details, see the article by Martin *et al.*, pages 774-792. Art by: Ewa Pocheć.
