On the cover, pictures show transparent human corneas covering the pupil and colored iris. A dataset of 141 distinct proteins identified in the normal human cornea by mass spectrometry is categorized according to the predominant tissue distribution of the proteins (*upper middle*, EC, extracellular; *IC*, intracellular; *PM*, plasma membrane-bound) and function (*lower left*, extracellular proteins; *lower right*, intracellular proteins). For details, see the article by Karring *et al.*, pages 1406–1408.
