On the cover, organellar proteome analysis to identify zymogen granule membrane proteins separated by two-dimensional gel electrophoresis and two-dimensional HPLC. iTRAQ™ reagent was used to quantitatively measure enrichment of intrinsic membrane proteins. 101 proteins were identified by tandem mass spectrometry. Confocal immunofluorescent images show newly identified membrane proteins, Rab27b and Rap1 (*red*), subluminal actin (*green*), and nuclei (*blue*). *Inset*, immunostained purified zymogen granules. For details, see the article by Chen *et al.*, pages 306–312.
