On the cover, a *ribbon diagram* showing the structure of the adipocyte fatty acid binding protein (aP2) modeled with an internal 4-HNE adjacent to the reactive cysteine (117). *Right image (lower)* shows the MS/MS sequence data identifying cysteine 117 as the site of covalent modification, whereas the *upper image* depicts the feed-forward loop linking oxidative stress to lipid peroxidation and protein carbonylation. For details, see the article by Grimsrud *et al.*, pages 624–637.
